 [Moazzam3214](#)
 [Muhammad Moazzam](#)

Passionate software engineering student focused on ML and AI. Skilled in building full-stack AI apps using Python, FastAPI, Streamlit, and LLMs. Experienced in NLP, semantic search, and model deployment with Docker. Driven to solve real-world problems through intelligent systems.

Skills

Programming

Python, JavaScript, C++

Web & Deployment

FastAPI, Streamlit, Docker

Frameworks and Libraries

TensorFlow, Keras, PyTorch, scikit-learn, Sentence Transformers, spaCy, NLTK

AI Tools & APIs

Google Gemini, OpenAI, Hugging Face, RAG Systems

Databases

SQL, Chroma, Pinecone, FAISS

Data Science

Pandas, NumPy, Matplotlib, Seaborn, Plotly

Projects

Resume Matcher | AI-Powered Recruitment Tool

 [Source Code](#)

- Built an intelligent resume screening system using NLP and semantic similarity, reducing manual screening time by 80%
- Implemented batch processing for 100+ resumes with ranked scoring and Excel export functionality
- Achieved 92% accuracy in skill matching through custom algorithms and LLM-powered feedback

EchoScribe | AI Audio/Video Transcription Platform

 [Source Code](#)

- Developed end-to-end platform converting audio/video to structured summaries with 95% transcription accuracy
- Built responsive web interface supporting multiple formats (MP4, MP3, WAV) with drag-and-drop functionality
- Containerized application with Docker for seamless cross-environment deployment

Ask My Doc | Document Q&A System

 [Source Code](#)

- Created RAG-based system for document Q&A with 88% relevance accuracy across PDF, DOCX, TXT files
- Implemented semantic search using FAISS vector database enabling sub-second query responses
- Built interactive chat interface with session memory for contextual document conversations

Pneumonia Detection | Medical AI Diagnostic Tool

 [Source Code](#)

- Developed CNN model for chest X-ray pneumonia detection achieving 90%+ accuracy on 5,000+ images
- Designed custom 5-layer architecture with regularization to prevent overfitting
- Built real-time web application for healthcare professionals with instant diagnostic insights

Toxic Comment Classifier | Content Moderation System

 [Source Code](#)

- Built multi-label classifier detecting 6 types of online toxicity from 150,000+ Wikipedia comments
- Achieved optimal F1-scores using ensemble methods (Logistic Regression, Random Forest, XGBoost)

Education

University of Central Punjab

BS Software Engineering

2023-Present

CGPA: 3.7

Certifications

Associate Data Scientist with Python

[!\[\]\(de95854c7ee024cfadc48187bbb781b2_img.jpg\) View on Datacamp.com](#)

Completed 33 courses and 10 projects in the DataCamp career track, gaining hands-on expertise in Data Science, Machine Learning, and Advanced Analytics techniques.

IBM AI Engineering

[!\[\]\(c50c8b7b2cc2cf9ff925edec0ee94c0d_img.jpg\) View on Coursera](#)

Completed 6-course specialization in machine learning and deep learning, with hands-on experience in neural networks, computer vision, natural language processing, and deploying ML pipelines.
